

ΣΥΜΒΟΛΗ

NG

BRAKES

STORIA DELL'AZIENDA

1969

Azienda produttrice di
Moulds e Matrixes.

1992

1992

Inizio della produzione dei dischi
freno per Nagesti.

2006

2 partner: Nagesti commerciale e
Tecme produzione.

2006

Tecme acquista la parte
commerciale, inizio del marchio
ng brake disc 90% oem e 10%
after market.

2007

Evoluzione verso il ricambio,
fino a diventare uno dei grandi
referenti dell'after market.
Attualmente 90% am 10% oem.

2022

Cambio immagine da
ng brake disc a **ng brakes**

2025

Distribuzione in più di 45 paesi su 5 continenti.
Importante crescita ogni anno.
Continua espansione della gamma di prodotti.
Costante investimento in macchinari e
modernizzazione dei processi produttivi.

FASI DEL PROCESSO PRODUTTIVO

Fase 1
TAGLIO LASER O ALLA PRESSA
Dischi provenienti dal laser e/o dalla pressa, una volta tagliati e con la forma interna realizzata.

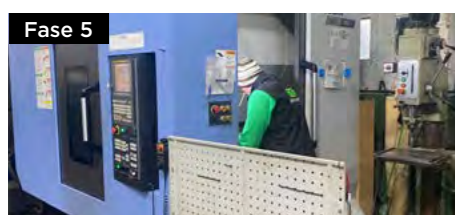

Fase 2
FORATURA DELLA PISTA
Nelle presse vengono praticati fori di ventilazione.

Fase 3
SPIANATURA
I dischi vengono fatti passare attraverso questa macchina per appiattire e de-stressare il materiale.

Fase 4
TEMPRA IN FORNO
Una volta appiattiti, i dischi vengono riscaldati in forno a 1050°, il che conferisce al prodotto la durezza necessaria.

Fase 5
LAVORAZIONE DELL'ANCORA
I fori di ancoraggio e di svasatura vengono eseguiti sui CNC.

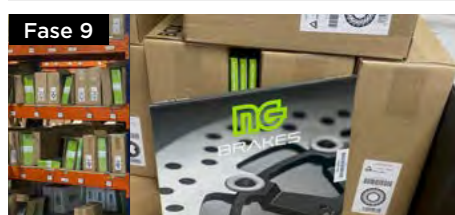

Fase 6
CATAFORESI
Trattamento del disco con vernice in polvere per prevenire la ruggine sulle parti interne.

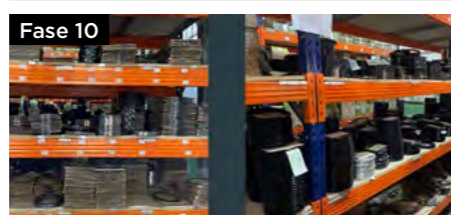

Fase 7
RETTIFICA
Due smerigliatrici in pietra macinano entrambi i lati dei dischi contemporaneamente e verticalmente, in modo che il disco esca dalla rettificatrice completamente piatto.

Fase 8
INCISIONE LASER E VERIFICA FINALE
Registrazione di tutti i dati sul disco (n. di lotto, rif., marca, ecc.) e controllo finale dei dischi (uno per uno).

Fase 9
IMBALLAGGIO DISCHI FISSI
Una volta registrati, i dischi vengono imballati, nel caso dei dischi fissi.

Fase 10
IMBALLAGGIO DISCHI FLOTTANTI
Nel caso dei dischi flottanti, (2 pezzi) vengono portati in magazzino separatamente (nucleo e pista.)

TIPI DI DISCHI

DISCHI FISSI

I dischi fissi sono utilizzati principalmente su:

- Moto di alta cilindrata al posteriore
- Moto di piccola cilindrata (50cc a ...)

DISCHI FLOTTANTI

- Il vantaggio principale del disco flottante che, grazie alla galleggiabilità, la pastiglia si adatta meglio e si ottiene una frenata migliore.
- Sono utilizzati principalmente per le moto di alta cilindrata.

ROTONDO

- Come produttori, raccomandiamo sempre i dischi rotondi.
- Hanno la superficie frenante più ampia e quindi le migliori prestazioni di frenata.

WAVE

- Si tratta più che altro di una questione estetica e di design.
- Non dimostrato che dissipino meglio il calore o frenino meglio di un disco rotondo.

RACE STAR

- Dischi progettati specificamente per i circuiti e la guida estrema.
- La forma dei fori di ventilazione rende il disco autoventilante, contribuendo a ridurre il calore e a migliorare la frenata.
- Dischi brevettato da **ng brakes**.

PREMIUM (Novità)

- Trattamento chimico integrato nel materiale (nessuna superficie).
- Elevate proprietà anti corrosione/rovigine.
- Migliore dissipazione del calore maggiore durata e resistenza all'abrasione.
- Trattamento ecologico (senza cromo).
- Design nuovo e accattivante.
- Finitura opaca e scura (grigio-nero).
